SUMMARY

Full stack software engineer with 3 years of experience, currently working as a Pleno engineer on an integrated retail management software, where I work with PHP and Laravel on the backend and React and TypeScript on the frontend. I maintain Herbst UI, an open source Angular component library. Bachelor's degree in Software Engineering and currently pursuing Computer Science at IFMA.

PROFESSIONAL EXPERIENCE

Voreli · Integrated Retail Management Software Feb 2025 - Present
Pleno Software Engineer · Imperatriz, MA (on-site)

- Moving the system to the platform's second generation without stopping customer operations, migrating data and rules module by module to a domain-based modular architecture.
- Building the backend in PHP and Laravel following Cruddy by Design: lean controllers on REST verbs and business logic isolated in actions.
- Supporting ERP, POS, tax, inventory, finance, CRM, e-commerce and recurring billing in a single product.
- Keeping domains independent from each other, with layer boundaries validated automatically and architecture decisions recorded in ADRs.
- Took heavy operations out of the user's response time with Redis queues and events, plus route and database query optimization.
- Delivered the product's screens in React and TypeScript on top of an in-house Design System.
- Block regressions before merge with TDD in Pest, Vitest and Playwright, CI/CD on GitHub Actions and monitoring with Sentry.

Zeta Coders · Online Courses and E-commerce Platform Dec 2024 - Apr 2025
Full Stack Developer · Imperatriz, MA

- Launched the learning area and the e-commerce in the same system, with REST APIs and business rules in Express.
- Delivered screens that work on desktop and mobile, turning Figma flows into React interfaces.
- Standardized the team's development and deployment environments with Docker.

TechJr (IFMA) · Junior Enterprise 2024 - 2025
Volunteer Developer · Imperatriz, MA

- Delivered junior enterprise projects as a developer, working in teams with shared tasks.
- Unblocked early-career peers by answering technical questions and reviewing code.

Freelance · Projects for End Clients Mar 2023 - Feb 2025
Full Stack Web Developer · Remote

- Delivered production REST APIs for end clients, with role-based access control, in Java with Spring Boot and in NestJS.
- Kept each client's rules on consistent foundations, modeling data in MySQL, PostgreSQL and MongoDB.
- Led projects end to end, from requirements to deployment, with React and Angular interfaces and CI/CD pipelines.

OPEN SOURCE PROJECTS

Herbst UI · Component Library for Angular ui.kauanherbst.dev

Creator and maintainer · Open source, in beta

- Shipped more than 65 ready-to-use Angular components, from button and input to table, calendar and chart.
- Left customization to the user: the CLI copies the component into the project, so adjusting it means editing the file.
- Documented the catalog in Portuguese and English, with live demos and ready-made light and dark themes.

EDUCATION

Universidade Norte do Paraná (UNOPAR) · Bachelor's Degree in Software Engineering Feb 2023 - Jun 2026

Completed

Instituto Federal do Maranhão (IFMA) · Bachelor's Degree in Computer Science Mar 2024 - In progress

TECHNICAL SKILLS

- **Languages:** PHP, TypeScript, JavaScript, Java, SQL, Python, R
- **Backend:** Laravel, NestJS, Express.js, Node.js, Spring Boot, Spring Security, Hibernate (JPA/ORM), REST APIs, layered architecture, domain-based modular architecture, multi-tenant, JWT authentication, queues and events with Redis
- **Frontend:** React.js, Angular, Next.js, TypeScript, HTML, CSS, Tailwind CSS, TanStack Query, Zustand, Zod, Radix, Vite, in-house Design System
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis, Supabase, relational modeling, versioned migrations, query optimization
- **Cloud and DevOps:** Docker, GitHub Actions, Git, Amazon Web Services (AWS), Sentry, deployment pipeline, Continuous Integration/Continuous Delivery (CI/CD)
- **Testing and quality:** Pest, Vitest, Testing Library, Playwright, JUnit, Jest, Test-Driven Development (TDD), E2E testing, static analysis, code review
- **Engineering practices:** Clean Code, design patterns, refactoring, ADRs (Architecture Decision Records), Conventional Commits, Scrum, quality gates

CERTIFICATIONS

- Santander Coders Program | Ada Tech | 12/2024
- Test-Driven Software Development (TDD) | Coursera | 02/2024
- Google Data Analytics Professional Certificate | Coursera | 09/2023
- Java (Basic) | HackerRank | 12/2023
- Python (Basic) | HackerRank | 12/2023
